

## Adding your ModelTalker voice to Communicator 5 or Grid 3

1. Log into your Modeltalker account
2. Go to Voices

3. Click on the blue Download Voice button

4. You will have 4 options of Downloads:
  - a. Windows
  - b. macOS
  - c. Android
  - d. iOS (for iPad)

Select Windows and click on the Download link to start downloading your voice installer file

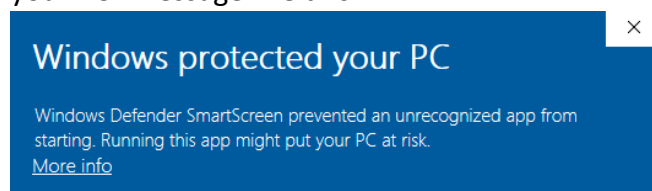

### Windows

Before you download your voice, you should uninstall any previous versions of ModelTalker or MTRV. A new version of ModelTalker will be installed with your voice. You should save the downloaded file on your desktop or some other convenient location and when the download is complete, double-click the installer icon to run the program.

[Download](#)

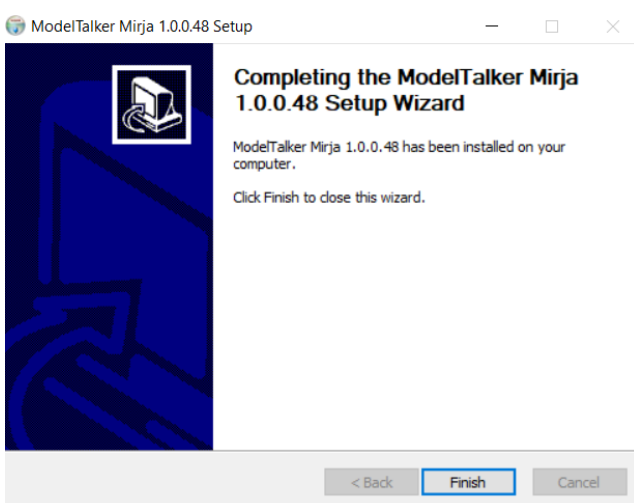

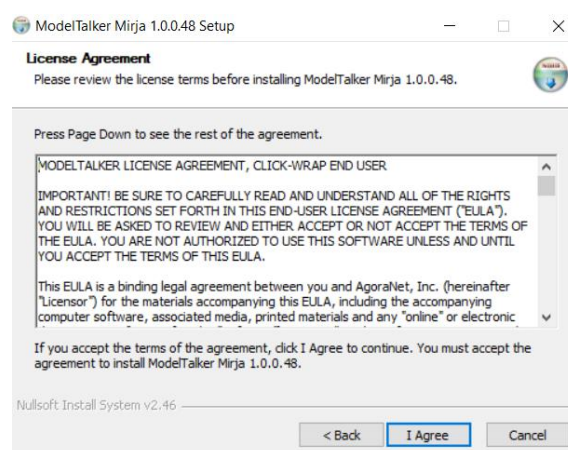

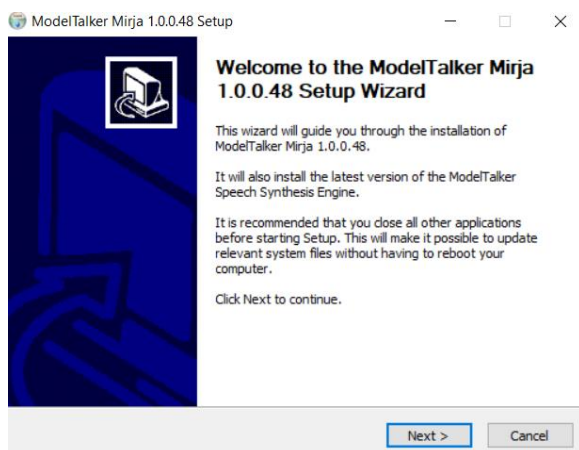

It will download as a .exe file to wherever your computer downloads – normally the Downloads folder.

5. Find the .exe file and double click it to run the installer. If you get a “Windows protected your PC” message like this:

Then click on More Info and choose Run Anyway.

- Say yes when the computer asks your permission to run the installer and then follow the prompts by clicking NEXT, then I Agree, then FINISH

- If you are using Communicator 5 then you should find the voice in your Sounds/Voices settings. However, if you had Communicator open during the process, shut it down and restart it. You should find your voice there.
- If you are running Grid 3 you need to change to US voices list. Grid 3 can still pick up the voice, but it is classed as a US voice.

Menu bar > settings > Speech > Voices > change to US in drop down list > select Model Talker voice.

The language for prediction etc will still be Australian.
